Hey Ryan,

I know it's Saturday so you probably won't get this until Monday. As Brad mentioned, I'm on-site through this weekend and Monday. I will be traveling back Kansas City at some point on Tuesday. Another OSC will be overlapping with me on Monday afternoon.

I am planning to select all or nearly all EPA's split samples from the additional characterization work on Sunday or Monday depending on the progress of work throughout the weekend. If you have any questions Monday or just want a general Site progress update, feel free to call my Cell number (816) 604-0546.

Ryan, yes we have plans to perform split sampling on this round of Area 1 and 2 fieldwork. We are pushing the lab task order through our office this week and Tom Mahler is lead for collecting splits in the field. Our scope is to collect 20% splits on subsurface soils and 100% on the 3 sediment samples. If you need to collect splits and want to coordinate, call Tom (913-551-7416). Tom plans to be onsite this Friday through Monday (covering weekend work), and will be out there over the next several weeks periodically (or another OSC will be there).

Hello Brad,

I just had a question regarding the opportunity for EPA to perform split sampling during the additional characterization activities as stated in the revised work plan. Do you have plans to perform split sampling during this event? If so do you have dates/times scheduled for these events?

Thank you
